Markdown to PDF, against other tools

Each tool converts the same document, `tester.md` without images, as a fresh process: median of 20 on four pinned cores, measured on 2026-10-20.

Tool	Version	Time	Against RayoMD	Peak memory
RayoMD	5.2.5	**1.34 ms**	1x	**3.4 MiB**
glu	0.0.46	55 ms	41x	33 MiB
Qt 6 `QTextDocument`	6.12.0	71 ms	53x	39 MiB
Pandoc + Typst	3.11, Typst 0.15.1	357 ms	266x	239 MiB
Pandoc + WeasyPrint	3.11, 70.0	987 ms	737x	241 MiB
md-to-pdf	5.2.5, Chromium 154	1,821 ms	1,359x	205 MiB
Pandoc + XeLaTeX	3.11, TeX Live 2026	2,147 ms	1,602x	340 MiB

Method

AMD Ryzen 5 PRO 4650GE, Arch Linux container without network. Times run from start to exit. In a running process (`--serve`, `--batch`) each further export takes 0.16 ms.

The tools render different Markdown subsets and look different: this compares time to a finished PDF, not identical output.
